Project Title

Development of an Online Real Estate Consultancy Platform with Agent Support

Project Purpose

Design and Implementation of a Real Estate Consultancy Platform with Agent Management and an AI Assistant for Property Recommendation

Members

- Iliya Mehri
- Amirreza Soleimani

Project Vision

A web-based real estate consultancy platform that connects buyers, sellers, and real estate agents. It provides property buying and selling services, agent management, and online consultation requests. An AI assistant recommends the most suitable properties based on the user's budget, location, area, and preferences. The system also includes an admin panel for managing agents, listings, and consultations.

Target Audience

- ❖Property Buyers
- ❖Property Sellers
- ❖Real Estate Agents
- ❖Agency Managers
- ❖Property Investors
- ❖Consultation Seekers

Core Features

Buyers

1. As a buyer, I want to register and log in so that I can access personalized features.
2. As a buyer, I want to search properties by location, price, area, and type so that I can find suitable options.
3. As a buyer, I want to filter and sort search results so that I can narrow down my choices.
4. As a buyer, I want to view property details with images and description so that I can evaluate it.
5. As a buyer, I want to chat with the assigned agent so that I can ask questions and schedule a visit.

Sellers

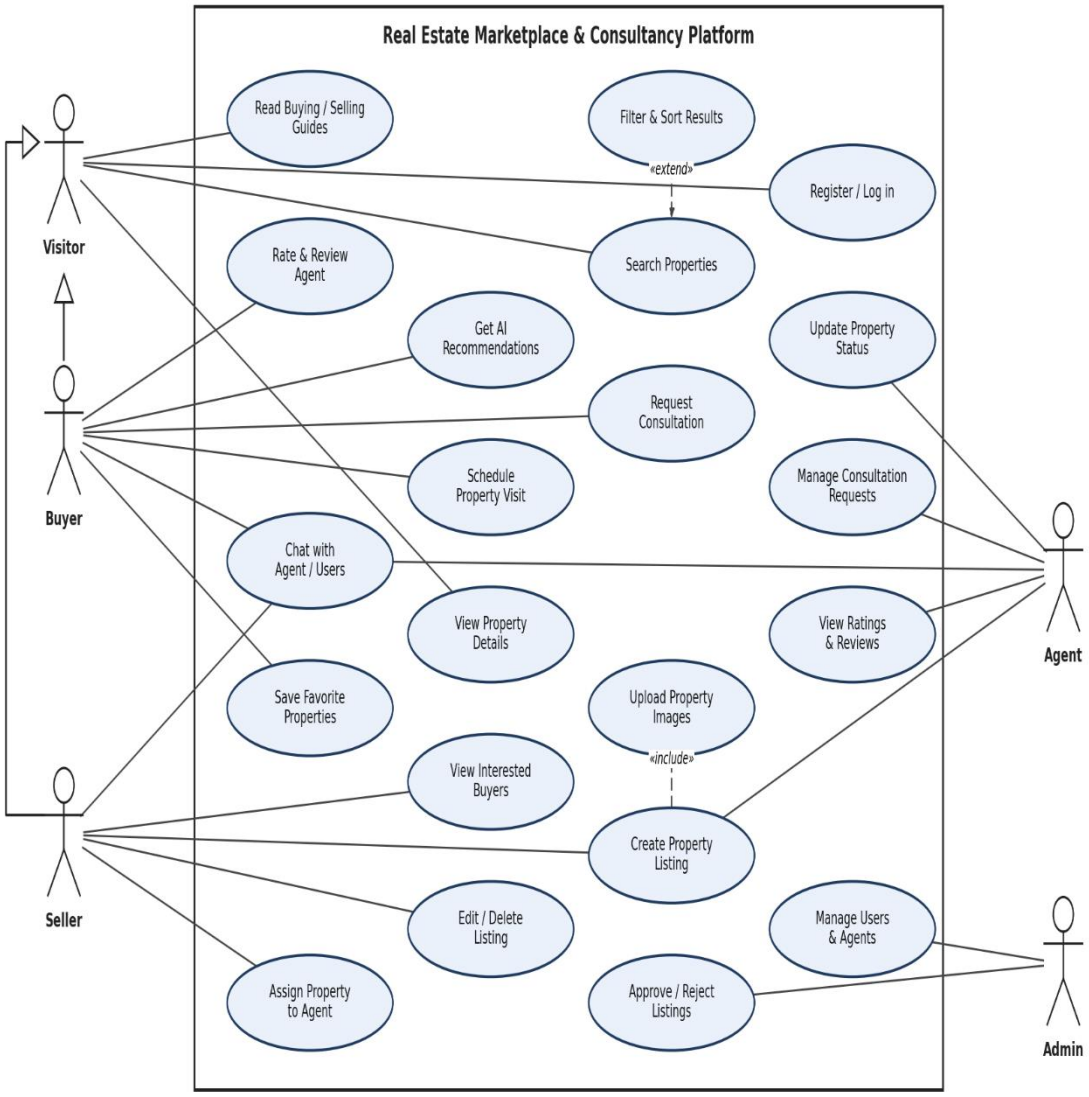

1. As a seller, I want to register and log in so that I can list my property.
2. As a seller, I want to add a new property listing with details and images so that buyers can see it.
3. As a seller, I want to edit or delete my listings so that I can keep them up to date.

4. As a seller, I want to view interested buyers or agents and assign my property to an agent so that the agent can help me sell it faster.
5. As a seller, I want to chat with the assigned agent or potential buyers so that I can communicate easily.

Agent

1. As an agency manager, I want to log in to my dashboard so that I can manage agents, listings, and consultations.
2. As an agent, I want to view properties assigned to me and update their status (available, under negotiation, sold) so that the information stays accurate.
3. As an agent, I want to add or edit property listings for my clients so that they appear on the platform.
4. As an agent, I want to receive consultation requests and schedule property visits with buyers so that I can contact them and meet at the property.
5. As an agent, I want to chat with buyers and sellers and view my ratings and reviews so that I can answer their questions and improve my service.

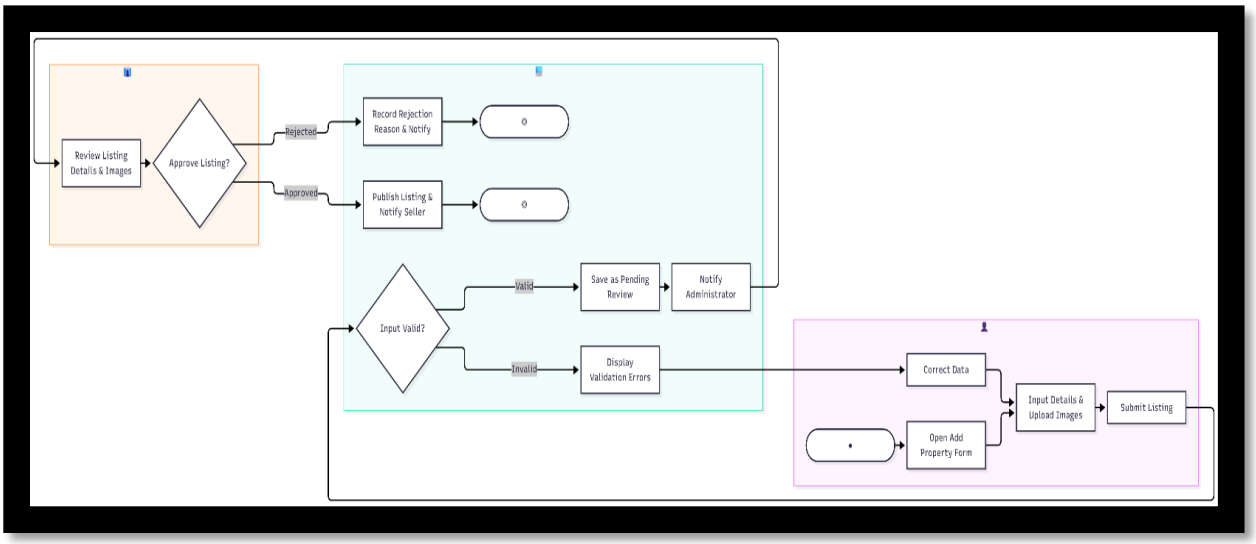

Use Case Diagram

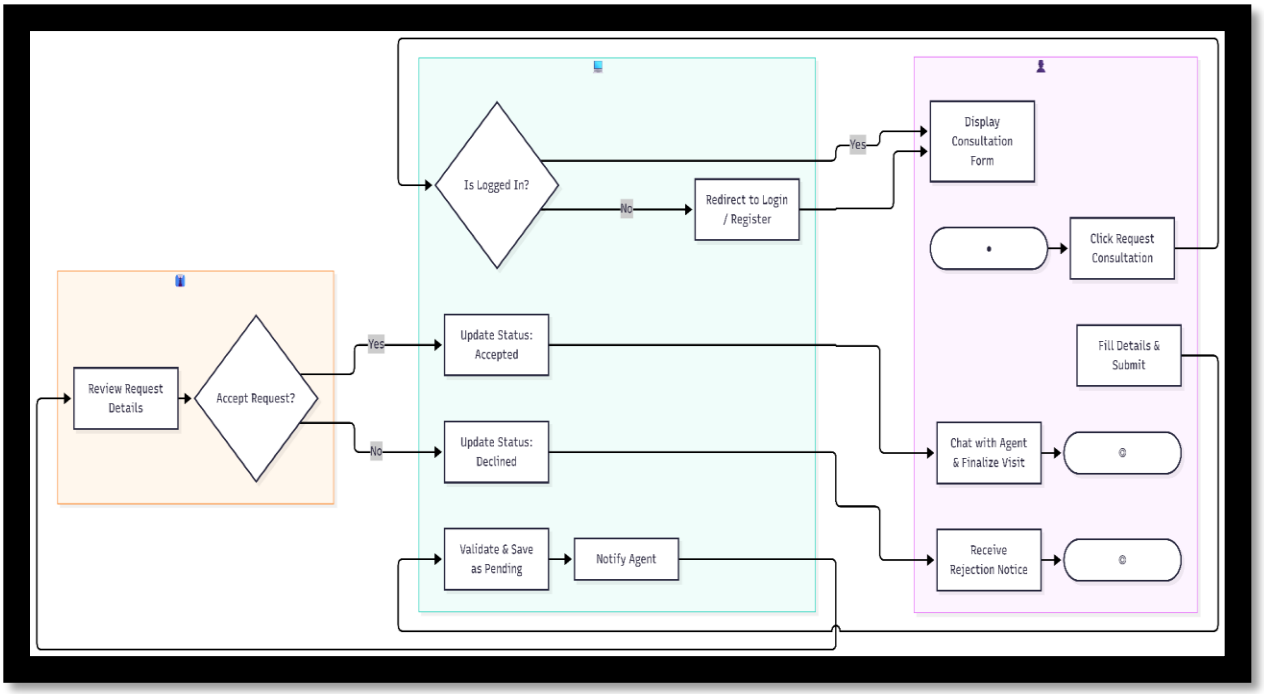

Notation: hollow arrowhead = generalization (Buyer and Seller are authenticated specializations of Visitor). Dashed arrow = «include» / «extend».
Agent and Admin authenticate through the same Register / Log in use case.
